Table 2: Percentage deviations from analytical results

1 4c

Figure 1: Expected Energy divided by L^2. $T = 1.0$.
*Equilibrium reached after 2^{20} Monte Carlo cycles.*

Figure 2: Expected Energy divided by L^2. $T = 2.4$.
*Equilibrium reached at same point as for $T = 1$.*

Figure 3: Expected absolute magnetic momentum divided by L^2. $T = 1.0$.
*Equilibrium reached at same point as for the energy.*

Figure 4: Expected absolute magnetic momentum divided by L^2. $T = 2.4$.
*Equilibrium reached at same point as for the others.*

Figure 5: Accepted moved divided by L^2.
